2.6 Use the set "administrator password" to log in to the device, you can see the basic information of the device, you can also choose more functional categories to set up;

3 FAQ

1. If I forget the login name and password of the device, what should I do (how to reset the router)?

A. If you forget the login name and password of the device, the only way you can do is do factory reset to the device, then the login name and password will be restored to their default values. At the bottom of the device there is a Reset button, when power is on, press and hold the button for 10 seconds, after the indicator LED has blinked 3 times rapidly, release the button and finish the Reset Operation.

2. What if I can't open the administrator page of device in browser?

A. Please make sure the IP address of your computer is in the same network segment as the IP address of the device administrator page you typed in browser: for example, if your device default login IP address is 172.16.0.1, then the IP address of your computer should have been 172.16.0.1.x (x is any integer between 2 and 254):

B. Please make sure your browser setting is "Never dial a connection" and disable proxy; Here are the steps of configuration (suppose you use IE): Click "Tools"-"Internet Options"-"Connections", choose "Never dial a connection"; Click "Lan settings", remove the option of "Proxy server".

C. Try change another computer to log in: If all the 3 hints above can't help you, please do the Factory Reset Operation to the device and log in again.

3. Why my laptop can't search out the signal of Wi-Fi SSID?

A. If your laptop has network adapter built-in, please make sure the Wi-Fi function is enabled (we recommend you connect the laptop vendor or read the laptop user manual);

B. At device manager interface, check whether the driver of network adapter has been installed successfully;

C. Check whether the wifi service has been turned on, right click the icon "my computer" on your desktop, choose manage. In "Computer Management" wizard, click "Services and Applications", then on the page of "Service", find the item "Wireless Zero Configuration" and check its Status value.

D. Please make sure you've enabled the wifi capability and enabled SSID broadcast.

E. Get closer to the router and try search again, Avoid the factor of obstacles which reduce the intensity of signal; If the hints above can't help you, please check out whether another wireless network adapter can be connected to the router. If it still doesn't work, please do the factory reset operation to restore the parameters back to their default values.
