3 Connect LAN Port

Wired Connection

2 Setting Steps

2.1 Wait for 20 seconds for the device to power on. Search for SSID (COMFAST_XXXXX) wirelessly, or connect the LAN port of the device with a network cable. Input IP (192.168.10.1) to enter the device management page and set the login password for the management page.

The image shows a screenshot of the COMFAST web management interface. At the top left is the COMFAST logo. Below it, there are two text input fields: "Set password" and "Confirm password". Below these fields is a black circular button with a white right-pointing arrow.

2.2 Setting Network Type Router (PPPoE, User Name, Server Name)

The image shows a screenshot of the COMFAST web management interface for network configuration. At the top left is the COMFAST logo. Below it is the title "Network Type". There are four text input fields stacked vertically: "WAN type PPPoE", "User Name", "Password", and "Server Name(AC)". At the bottom of the screen are two black circular buttons with white arrows pointing left and right.

2.3 Set the wireless SSID and click  to complete the setup.

3 FAQ

1. If forget the login name and password of the device , what should I do(how to reset the router)?

A. If you forget the login name and password of the device, the only way you can do is do factory reset to the device, then the login name and password will be restored to their default values. At the bottom of the device there is a Reset button, when power is on, press and hold the button for 10 seconds, after the indicator LED has blinked 3 times rapidly, release the button and finished the Reset operation.

2. What if i can't open the administrator page of device in browser?

A. Please make sure the ip address of your computer is in the same network segment as the IP address of the device administrator page you typed in browser: for example, if your device default login IP address is 192.168.10.1, then the IP address of your computer should have been 192.168.10.x(x is any integer between 2 and 254):

B. Please make sure your browser setting is "Never dial a connection" and disable proxy; Here is the steps of configuration (suppose you use IE): Click "Tools"- "Internet Options"- "Connections", choose "Never dial a connection"; Click "Lan settings", remove the option of "Proxy server".

C. Try change another computer to log in: If all the 3 hints above can't help you, please do the Factory Reset Operation to the device and log in again.

3. Why my laptop can't search out the signal of Wi-Fi SSID?

A. If your laptop has network adapter built-in, please make sure the Wi-Fi function is enabled (we recommend you connect the laptop vendor or read the laptop user manual);

B. At device manager interface, check whether the driver of network adapter has been installed successfully;

C. Check whether the wifi service has been turned on, right click the icon "my computer" on your desktop, choose manage. In "Computer Management" wizard, click "Services and Applications", then on the page of "Service", find the item "Wireless Zero Configuration" and check its Status value.

D. Please make sure you've enabled the wifi capability and enabled SSID broadcast.

E. Get closer to the router and try search again, Avoid the factor of obstacles which reduce the intensity of signal; If the hints above can't help you, please check out whether another wireless network adapter can connected to the router. If it still don't work, please do the factory reset operation to restore the parameters back to their default values.
